

# ICS4ICS/FEMA Training & Exercise

## Build Incident Readiness with ICS4ICS + FEMA Credentialing

Cyber incidents are becoming more frequent and complex; impacting operations, safety, and public trust. The ICS4ICS program, developed by **ISAGCA** and aligned with FEMA's **NIMS/ICS** standards, equips cybersecurity and incident response professionals with the practical skills and structure to manage cyber crises using proven emergency management models.

This **3 day program** combines FEMA-certified learning modules with the ICS4ICS framework to help participants build effective cyber incident response capabilities, understand national coordination protocols, and participate in live response exercises modeled after real-world attacks.

## Details

 Jakarta, Indonesia

 19 - 21 August 2025

**Facilitator:**  
International ICS4ICS Trainer

## What are the Benefits?

This immersive course allows participants to earn **ICS4ICS** and **FEMA** credentials while actively building the knowledge and confidence to lead or support a coordinated cyber response effort. You will gain a deep understanding of incident command structures, inter-agency coordination, staffing strategies, and key processes for managing ransomware events, reporting obligations, and crisis communications.

The training concludes with a **full-day tabletop cyber exercise**, where participants will apply their knowledge in live team-based simulations. By the end of the program, you'll walk away with **industry-standard procedures**, practical tools, and an ICS4ICS credential recognized across critical infrastructure sectors.

## Learning objectives

- Understand and apply **FEMA's NIMS/ICS** system within cyber incident response scenarios
- Learn how **ICS4ICS** enhances response time and coordination during industrial cyber incidents
- Identify internal and external roles, responsibilities, and reporting processes
- Gain practical exposure to **staffing and mutual aid models** for response readiness
- Utilize industry frameworks for ransomware, reporting, and playbook development
- Participate in a **guided cyber response exercise** based on real-world incident
